

What is a photovoltaic solar module?

Risen's photovoltaic solar module is a DC power supply, which has the character of high reliability and nearly no-maintenance. It can be used in power systems of remote areas, home power systems, renewable energy vehicles, hydropower stations, water pumps, communication system or constitute solar photovoltaic power station directly.

What happens if solar photovoltaic module part by Shadow block?

If solar photovoltaic module part by shadow block, which can lead to reverse voltage related to solar cells, solar photovoltaic modules in other unaffected battery string or other solar PV modules in the system and current will force through keep out part of the power loss and heat affected cell.

Can you switch a microinverter PV module from series to parallel?

Typically, microinverter PV modules are available in series or parallel connection options. Because of how the panels are constructed, you can't switch a microinverter panel from series to parallel just by changing the wiring between terminals from module to module.
