

A brief discussion on solar power generation

How is solar power generated?

Solar power is generated in two main ways: Solar photovoltaic(PV) uses electronic devices,also called solar cells,to convert sunlight directly into electricity. It is one of the fastest-growing renewable energy technologies and is playing an increasingly important role in the global energy transformation.

What is a solar power plant?

It is a large-scale PV plant designed to produce bulk electrical power from solar radiation. The solar power plant uses solar energy to produce electrical power. Therefore,it is a conventional power plant. Solar energy can be used directly to produce electrical energy using solar PV panels.

What is the future of solar energy?

Progress has been made to raise the efficiency of the PV solar cells that can now reach up to approximately 34.1% in multi-junction PV cells. Electricity generation from concentrated solar technologies has a promising future as well, especially the CSP, because of its high capacity, efficiency, and energy storage capability.

How can solar energy be used to generate electricity?

Sun is an inexhaustible source of energy capable of fulfilling all the energy needs of humankind. The energy from the sun can be converted into electricity or used directly. Electricity can be generated from solar energy either directly using photovoltaic (PV) cells or indirectly using concentrated solar power (CSP) technology.

Is a solar power plant a conventional power plant?

The solar power plant uses solar energy to produce electrical power. Therefore,it is a conventional power plant. Solar energy can be used directly to produce electrical energy using solar PV panels. Or there is another way to produce electrical energy that is concentrated solar energy.

What are the advantages and disadvantages of solar PV power generation?

There are advantages and disadvantages to solar PV power generation. PV systems are most commonly in the grid-connected configuration because it is easier to design and typically less expensive compared to off-grid PV systems,which rely on batteries.
