

What are the components of a balcony Solar System?

1. Solar Panels: The core component of a balcony solar system is solar panels, usually mounted on the top or sides of the balcony. These solar panels consist of numerous solar cells that convert sunlight into direct current (DC) electricity. 2.

Are plug-in balcony solar panels a good option?

Plug-in balcony solar panels can be a great option for people living in flats or rented accommodation. They aren't as expensive as regular roof-mounted systems, and they can still save you a little on your electricity bills. If you'd rather get solar panels professionally installed, we can help.

Do solar panels work on balconies?

Solar panels on balconies can work well, as long as nothing is obstructing light from reaching the panels. For example, balcony walls, nearby trees, or buildings can cast a shadow on the solar panels and reduce their electricity output. The angle and direction the solar panels will also affect their output.

What are the disadvantages of balcony solar panels?

Another disadvantage of balcony solar panels is that, depending on the set-up, they take up most of the balcony - one panel is around two square metres. You can free up space on the balcony if you opt to hang the solar panels from the balcony railings or wall.

Do you need a professional to install solar panels on a balcony?

Plug-in solar panels on balconies do not need to be installed by a professional. The solar panels just need to be propped up on the balcony, or suspended from the balcony railings, in an unobstructed spot that receives direct light.

How big should a balcony be for solar panels?

For a balcony to be suited for solar panels, it needs to be at least one metre long, and one metre wide. This is the minimum amount of space needed to fit the average plug-in solar panel.
