What is the internal rate of return for a PV system?

The formula for the internal rate of return for a PV system includes the following components/definitions: PV system cost, First cost subsidies, PV energy cost and Secondary Market Characteristics and PV energy price. PV system cost (PV<sub>sys</sub>) equals the installed cost of the photovoltaic system.

How do you determine the financial viability of a solar energy system?

To determine the financial viability of a solar energy system means factoring in future electricity rate inflation into the equation. The higher the assumed rate of inflation, the quicker the payback, and the higher the IRR on the money invested into the system.

What is the net present value of a solar energy system?

The Net Present Value, of the difference between the photovoltaic system's energy cost and price, determines the IRR. The IRR defines the amount of profit investors' gain by investing in a solar energy system--as a percentage. For example, an IRR of 12% means the investor makes a profit of 12% per year on any funds invested in the project.

How much energy does a PV system need to be stored?

Ferroni and Hopkirk's in relative terms, the revised energy investment would then be 6.9% of 290 kWhel/m<sup>2</sup> 20 kWhel/m<sup>2</sup>. ? Ferroni and Hopkirk then assume, without any reference or attempt at simulation, that 25% of the generated PV electricity needs to be stored.

How do I determine a good IRR for a solar project?

The best approach to determining a good IRR for a solar project is to consider the unique circumstances of your project. Here are some key factors to evaluate: Project Costs: The upfront investment cost and ongoing maintenance expenses directly impact the potential return.

Should you invest in a solar energy plant?

Investing in a solar energy generation plant creates dividends in the form of cash, no longer paid to the utility supplier. A solar energy system has an internal rate of return, with a yield, higher than most investments. Electricity Rates and Inflation Historically, electricity prices trend up due to inflation.
