

California rooftop solar power

Does California have a rooftop solar program?

Lea este artículo en español. The California Public Utilities Commission today overhauled the state's rooftop solar regulations, reducing payments to homeowners for excess power but providing nearly a billion dollars in incentives to encourage more solar projects for low-income homes.

What percentage of California's electricity comes from rooftop solar?

About 1.5 million rooftop solar systems are installed on California's houses, schools and small businesses. About 14% of California's total electricity comes from large-scale solar projects; another 10% of the state's power comes from rooftop residential solar.

Why is California reducing rooftop solar?

California has long championed renewable energy, but a change in the state's policies last year has led to a sharp decline in the installation of residential rooftop solar in the state.

Will California limit the growth of rooftop solar?

The California Solar and Storage Association said the decision would limit the growth of rooftop solar even as the state was trying to increase the use of clean energy and reduce the burning of fossil fuels, the primary cause of climate change.

What does California's solar energy overhaul mean for California?

They established a framework for utilities to buy excess solar energy from homeowners and supplement power to the grid. The overhaul comes as California needs to lean more heavily on renewable energy to meet state targets to produce zero-carbon electricity by 2045 and end use of fossil fuels.

Will new solar projects slow construction in California?

After a unanimous vote today by the CPUC, homeowners get smaller payments from utilities, which solar companies say will slow construction of new rooftop solar projects. But new state incentives will be available. Welcome to CalMatters, the only nonprofit newsroom devoted solely to covering issues that affect all Californians.
