What is the difference between connecting solar panels in series vs parallel?

Connecting your solar panel in series vs parallel affects current flow and is dictated by your installation's setup. Warning: Science below! While we're not going to get too deep into the details, the difference between connecting solar panels in series vs in parallel is an intermediate level solar discussion.

Why do solar panels need to be connected in parallel?

Connecting solar panels in parallel is just the opposite of series connection and is used to increase the total output current of the array, and hence the total output power while keeping the same voltage. 'The same voltage' is the system voltage which for off-grid solar panels systems is usually as low as either 6V or 12V.

Should I install solar panels in series or parallel?

For most small solar projects dealing with fairly minor energy needs of a few hundred watts per day, a series connection is better. Arrays with modules placed in series require fewer parts and use thinner (less expensive) wire than systems with panels arranged in parallel.

Should solar panels be connected in series?

Generally speaking, a series connection is preferable for most smaller solar projects. Usually, this includes RV, boat, trailer, and camper van trips. It's easier to set up solar modules in series. Series connections require less hardware. It's less expensive to do wiring in series.

Does connecting solar panels in parallel affect wattage?

No. Connecting solar panels in serial or parallel does not impact how much wattage they produce in laboratory conditions. Connecting solar panels in parallel increases amperage and keeps voltage constant. Series connections produce higher voltage while maintaining amperage, regardless of how many panels you use.

What happens if you install solar panels in series?

When installing solar panels in series, the voltage adds up, but the current stays the same for all of the elements. For example, if you installed 5 solar panels in series - with each solar panel rated at 12 volts and 5 amps - you'd still have 5 amps but a full 60 volts. There are some major benefits to connecting solar panels in series.
