Is potato a suitable plant for agrivoltaics?

The same trends were observed by Ref. ,suggesting that the potato is a suitable plant for agrivoltaics. An increase in sweet pepper (*Capsicum annuum* L.) production and number of fruits per plant was also observed in crops grown under a solar array,without affecting the quality of the production [65,66].

Can a solar photovoltaic plant be combined with agricultural production?

To address competition for land,it is possible to combine the installation of a solar photovoltaic (PV) plant with agricultural production on the same area . This new production system was first devised and proposed in the 1980s to allow additional use of agricultural land .

Can agrivoltaic plants be grown under solar panels?

Plants considered intolerant to shading could be grown under solar panels under certain conditions. Benefits of agrivoltaics are also linked to reduced water consumption,improved crop protection and increased animal welfare. Increased global demand for food and energy implies higher competition for agricultural land.

Does agrivoltaic installation affect the yield of potatoes?

The agrivoltaic installation has therefore made it possible to produce electricity withoutaffecting the yield of the potatoes. In addition,the quality of the tubers was only slightly affected,with a similar marketable proportion between treatments.

How to design a photovoltaic panel for agriculture?

The design must consider crop type, spacing, height, PV panel orientation, and spacing [23, 73]. Coverage rate of PV panels: Huang et al. discuss the difficulties of determining photovoltaic panel coverage for agriculture . Different regions have different crops and environments, and solar panel material affects transparency.

How do photovoltaic panels affect plant growth?

In the morning and late afternoon hours, the position of the photovoltaic panels was altered to reduce crop shading, whereas at solar noon, shading was increased to reduce evapotranspiration and adverse effects of high temperature and excessive radiation on plant growth.
