

Can small wind power be connected to the grid for power generation

What is a grid-connected wind turbine?

A grid-connected wind turbine is a type of small wind energy system that is connected to the electricity distribution system. It can reduce your consumption of utility-supplied electricity for lighting, appliances, and electric heat.

Can wind power be used in a microgrid system?

Wind power can be used in isolated off-grid systems, or microgrid systems, not connected to an electric distribution grid. In these applications, small wind electric systems can be used in combination with other components -- including a small solar electric system -- to create hybrid power systems.

How do small wind energy systems work?

Small wind energy systems can be connected to the electricity distribution system. A grid-connected wind turbine can reduce your consumption of utility-supplied electricity for lighting, appliances, and electric heat. If the turbine cannot deliver the amount of energy you need, the utility makes up the difference.

Can a grid-connected wind turbine reduce electricity consumption?

A grid-connected wind turbine can reduce your consumption of utility-supplied electricity. Federal regulations (the Public Utility Regulatory Policies Act of 1978, or PURPA) require utilities to connect with and purchase power from small wind energy systems.

Can a small wind electric system provide all of your energy needs?

This guide by K. O'Dell from NREL, titled 'Small Wind Electric Systems: A U.S. Consumer's Guide', provides consumers with information to help them determine whether a small wind electric system can meet all or a portion of their energy needs for their home or business based on their wind resource, energy needs, and economics.

Can a small wind system be combined with other energy sources?

Possibilities for combining your system with other energy sources, backups, and energy efficiency improvements. For more information, please consult WINDEXchange's Small Wind Guidebook or contact the Distributed Wind Energy Association to find a small wind installer in your area. [Back to Top](#)
