

Nearly all types of solar photovoltaic cells and technologies have developed dramatically, especially in the past 5 years. Here, we critically compare the different types of ...

Understanding the charge carrier transport characteristics at the graphene-GaN interface is of significant importance for the fabrication of efficient photoresponsive devices. Here, we report ...

Graphene-on-bulk semiconductor 2D/3D heterojunction photovoltaic sensors are emerging candidates for large-scale integration and for relatively high-efficiency and robust solar technologies...

Passivating contacts in heterojunction (HJ) solar cells have shown great potential in reducing recombination losses, and thereby achieving high power conversion efficiencies in photovoltaic devices.

Heterojunction formed at the amorphous/crystalline silicon (a-Si:H/c-Si) interface exhibits distinctive electronic characteristics for application in silicon heterojunction (SHJ) solar cells. The incorporation of an ultrathin ...

Here, we reviewed the recent progress on photovoltaic solar cells of these 2D materials and their heterostructures with different device configurations. The p-n junction solar ...

Silicon solar cells so far can be divided into diffusion-based homojunction solar cells and Si heterojunction solar cells, according to their device technologies. Currently, the ...

Heterojunctions based on p-CuO/n-ZnO, prepared by simple methods such as spin coating, normally exhibit low photoconversion efficiency and require modification. Doping ...

Photovoltaic (PV) cells, or solar cells, are semiconductor devices that convert solar energy directly into DC electric energy. In the 1950s, PV cells were initially used for space applications to ...

Heterojunction formed at the amorphous/crystalline silicon (a-Si:H/c-Si) interface exhibits distinctive electronic characteristics for application in silicon heterojunction (SHJ) solar ...

The OPV cells hold promises to transform the solar energy sector as they can be integrated with printing technologies and can manufacture thin, flexible photovoltaic cell. ...

The effect of varying the thickness of Silicon window layer, the band gap of CIGS absorber layer and the temperature of the junction on the photovoltaic characteristics of ...

Characteristics of heterojunction photovoltaic panels

The main objective of this paper is to present the fabrication of a flexible double-heterojunction gallium arsenide solar cell and analyse the photoelectric characteristics by ...
