

China Southern Power Grid Weibo

How many kilowatt-hours does China Southern power grid use?

China Southern Power Grid said the five regions that it covers have consumed 540 billion kilowatt-hours of clean energy during the first nine months, with the renewable energy generation efficiency reaching 99.81 percent, up 0.22 percent year-on-year. Newly added installation of new energy reached 3.31 million kW.

Can China decarbonize the southern power grid by 2060?

Decarbonization of the Southern Power Grid in China is feasible by 2060 but requires converting a large cropland area to support solar and wind energy; expansion of hydropower will impact the transboundary rivers according to a power system optimization model set up for 2020-2060.

Which CSPG basins are covered by a hydropower simulation?

The simulation covers six basins across the CSPG, i.e., Mekong, Nujiang, Yangtze, Yuan and Red, Pearl, and QSGCRB, which encompass more than 120 GW of existing hydropower capacity and 32 GW of projected hydropower capacity 58 (Table S14).

Should Guangxi support solar and wind plants?

First, the deployment of solar and wind plants reflects the geographical distribution of these resources, but may also lead to unfair land use requirements; in this specific case, the sole province of Guangxi should support 43% of the total land requirements across the CSPG (Table S4).

China Southern Power Grid est une entreprise publique chinoise créée en 2002 qui est un des 2 gestionnaires de réseau de transport d'électricité chinois (l'autre société est la State Grid ...
