How many states have microgrids?

Of the 692 microgrids in the United States, most are concentrated in seven states: Alaska, California, Georgia, Maryland, New York, Oklahoma, and Texas. Interest in microgrids is growing because of their ability to incorporate renewable energy sources and sustain electricity service during natural disasters.

Which states can facilitate microgrid development?

States can facilitate microgrid development. California, Connecticut, Massachusetts, New Jersey, and New York have created clean energy banks, grants, or other funding opportunities for microgrids. For example, New York has established a \$40 million grant program to create community microgrid projects.

Do cities need microgrids?

While single-user and campus microgrids, such as those that serve an industrial site or military base, have existed for decades, many cities are now interested in systems that can better integrate generation resources and load, serve multiple users, and/or meet environmental or emergency response objectives.

What microgrids are being built in California?

The Clean Coalition is designing and staging a number of microgrids around California, such as our Goleta Load Pocket Community Microgrid, Solar Microgrids for the Santa Barbara Unified School District, a Residential Solar Microgrid, and more. Key Alcatraz Island Microgrid features:

Are microgrids a good investment?

Microgrids that incorporate renewable energy resources can have environmental benefits in terms of reduced greenhouse gas emissions and air pollutants. In some cases, microgrids can sell power back to the grid during normal operations. Depending on the complexity, microgrids can have high upfront capital costs.

How can microgrids improve city resilience?

Microgrids, tailored energy systems for specific neighbourhoods and districts, play a pivotal role in sustaining energy supply during main grid outages. These solutions not only mitigate economic losses and well-being disruptions against escalating hazards but also enhance city resilience in alignment with Sustainable Development Goal (SDG) 11.
