

Clamp ammeter test photovoltaic panel

What is a 393 FC solar clamp meter?

393 FC solar clamp meter measures up to 1500 V dc, 1000 V ac, IP54 rated, CAT III. Ideal for PV installation, solar PV arrays, electric railways and data centers.

How many volts can a iFlex clamp meter measure?

The clamp meter will measure up to 1500 VDC and 1000 V AC with test leads, and up to 999.9 A DC or AC through the clamp jaw. The included iFlex flexible current probe extends AC current measurements up to 2500 A. The 393 has a thin jaw, giving you access to cables in crowded combiner boxes.

Can a multimeter test a solar panel?

Your multimeter is your best friend when testing solar panels. You can use it to check: Here's how: Multimeter -- I recommend getting one that is auto-ranging. Also, a simple voltmeter won't work here. You need a multimeter that can measure both volts and amps. 1.

How do I check the voltage on my solar panel?

It can be used to verify: On the label on the back of your solar panel, look for the open circuit voltage (Voc). Connect the red probe to the voltage terminal and the black probe to the COM terminal to set up your multimeter. Set the DC voltage setting and the appropriate voltage range on the multimeter.

How do you measure voltage with a multimeter?

The voltage you measure with your multimeter should be close to the open circuit voltage listed on the back of the panel. It doesn't have to be identical, though. If they're similar, so far your panel seems to be in good condition. You can move on to the next step -- measuring short circuit current.

What is a good voltage for a solar panel?

I measured a Voc of 19.85V on my panel. The claimed Voc for this panel is 19.83V, so we're spot on. The voltage you measure with your multimeter should be close to the open circuit voltage listed on the back of the panel. It doesn't have to be identical, though. If they're similar, so far your panel seems to be in good condition.
