Can fuel cell and battery energy storage improve aircraft performance?

Recent developments in fuel cell (FC) and battery energy storage technologies bring a promising perspective for improving the economy and endurance of electric aircraft. However, aircraft power system configuration and power distribution strategies should be reasonably designed to enable this benefit.

How to determine the size of aircraft energy storage systems?

Based on the comprehensive analysis of hydrogen economy, FC aging cost, and aircraft stability, a multi-objective parameter optimization model is established to decide the size of aircraft energy storage systems and hyper-parameters in the power controller.

How can aircraft energy storage systems and hyperparameters be optimally sized?

Meanwhile, based on the comprehensive analysis of hydrogen economy, FC aging cost, and aircraft stability, a multi-objective parameter sizing model is established to optimally size aircraft energy storage systems and hyper-parameters in power controllers.

How to optimize aircraft power system configuration & energy management strategy?

To summary, both the optimal power system configuration and energy management strategy can be derived with the developed integrated optimization method, aircraft hydrogen economy and FC anti-aging performance can be significantly improved.

Why do aircraft use hybrid energy storage technology?

In (a), the FC works under idle and heavy load states in 23% and 65% more time, the reason is that it should cover all the power requirements of the aircraft in the whole voyage. Compared to FC aircraft, the use of hybrid energy storage technology can significantly relieve the working pressure of FC stack.

Why do aircraft batteries need chemistry and package design?

The combination of the need for high specific energy and specific power, very wide environmental capability and shallow depth of discharge, all underpinned by safety, implies that the optimization of both the chemistry and package design for aviation offer new challenges for the battery community.

A hybrid energy storage system specifically designed for a fully electric aircraft is presented in the paper. The analysis of the time evolution of the power demand of the electric propulsion ...
