

# Construction site solar light tube fixing bracket

How to install solar panels & brackets?

Assembly of solar panels and brackets: Align the installation holes of the solar panels and brackets and tighten the screws. Pre-assembly of batteries: Place the batteries in the battery box, install the sealing ring, and thread the battery wires from the top cover wire outlet. Cover the top cover, align it with the holes, and tighten the screws.

How do I choose a solar light installation site?

Ensure your solar light installation site is free of obstructions from access to the sun. Also, you'll want to ensure there aren't foreign light sources that can interfere with the panel's light sensor. Keep the pole away from heat sources and ensure it's on level, solid ground (we can accommodate if the soil isn't the most sturdy).

How to fix a solar panel to a lamp post?

Use rustproof screws to fix the solar panel to the lamp post, and pay attention to the orientation of the solar panel towards the sun. If you are not sure what is a rust-proof screw, you can directly consult a professional fastener manufacturer. Secure the lamp arm to the lamp post and tighten the screws.

How to install solar panels?

Affix the mounting bracket to the solar panels with bolts and nuts. Connect the cables from the panels to the cables coming from the pole. Ensure the waterproof connectors are connected securely. Use a multimeter to test the panel voltage. This test must be done during the day. The voltage output of the panel must be around 20V (per panel).

How do I install a solar panel fixture?

Your fixture may look different than the one depicted below. Slide the fixture onto the arm, level it, and then tighten the fixture with mounting bolts. Before installing, verify that your inclination angle for the solar panel is provided.

Are solar street lights maintenance-free?

Solar street lights are designed to be essentially maintenance-free. However, in certain regions with extreme conditions, some level of maintenance is required to ensure the proper function of the lights. These regions are typically where there is a risk of dust, snow, or ice covering the solar panels and thus reducing the power of the lights.
