

# Current status of microgrid development in Japan

How will microgrids impact Japan's Energy Future?

As microgrids appear across the country, they will play an increasingly important role alongside the grid system to deliver clean and reliable power. Japan is currently aiming for 22%-24% of its energy to be produced by renewable sources by 2030, which will include 64GW of solar power.

When did microgrids start in Japan?

The first microgrids in Japan were New Energy and Industrial Technology Development Organization-financed projects initiated in Aichi, Kyoto and Hachinohe in 2003. A variety of energy sources were tested, in particular gas engines, and their success was demonstrated in the years that followed.

Why are microgrid systems becoming more popular in Japan?

The success of projects such as Higashi Matsushima eco city has increased the popularity of microgrid systems in Japan. In August 2017, the Cabinet Office announced it would be increasing National Resilience Programme funding by 24%, as of April 2018.

Why should Japan invest in microgrids?

In addition, Japan's energy policy sees safety as one of the primary objectives since the Fukushima disaster of 2011. One approach is to improve resilience against disruptions. Here, microgrids as the technological foundation for smart communities play an important role.

Does Japan have a smart grid?

Japan has had much success with implementation of some of the core technologies necessary for microgrids, e.g. smart meters. This study investigates the interplay of smart grids and integration of renewable energy in Japan on the intersection between policy, legislation, technology and market.

Does Japan need a microgrid?

The 9.0 magnitude earthquake, which hit off the coast of Sanriku, caused vast amounts of damage to Japan's energy infrastructure, increasing the need for the project roll-out. "It has been accelerated due to the 2011 Great East Japan disaster, and about JPY45bn of funding has been granted" for further development of microgrids, says Kashiwagi.

A small town in Chiba Prefecture has created a microgrid--a decentralized electric power system--utilizing locally produced natural gas and solar energy. This innovation exemplifies how regional energy diversification ...

a microgrid, the current status of the literature, on-going research projects, and the relevant standards. It also presents a review of the microgrid pilot projects around the ...

# Current status of microgrid development in Japan

The aim is to evaluate the current status, problems and research efforts toward realising functional microgrids in the power system. The expectations about microgrid are ...

This renewable energy microgrid system architecture makes it possible to reverse the direction of electrical current and share electricity between connected homes. Its completion will mark the ...

Microgrid systems: Current status and challenges ... some design and planning methods for the development of renewable energy microgrids in remote systems is presented. As can be seen, various aspects related to microgrid systems ...
