What is a solar tower?

A solar tower, also known as a solar power tower, is a way to concentrate solar power to make it a more powerful energy source. Solar towers are sometimes also called heliostat power plants because they use a collection of movable mirrors (heliostats) laid out in a field to gather and focus the sun at the tower.

What is a solar tower - power plant?

Solar tower - Power plant. In solar power stations, mirrors are used to concentrate sunlight and convert it into thermal energy. This process enables temperatures of more than 1000 degrees Celsius to be achieved, which can be used to generate electricity, among other things.

How do power tower concentrating solar power systems work?

In power tower concentrating solar power systems, a large number of flat, sun-tracking mirrors, known as heliostats, focus sunlight onto a receiver at the top of a tall tower. A heat-transfer fluid heated in the receiver is used to heat a working fluid, which, in turn, is used in a conventional turbine generator to produce electricity.

Why are solar towers called heliostat power plants?

Solar towers are sometimes also called heliostat power plants because they use a collection of movable mirrors (heliostats) laid out in a field to gather and focus the sun at the tower. By concentrating and collecting solar energy, solar towers are considered a type of renewable energy.

How does a solar tower work?

As the sun shines down on a solar tower's field of heliostats, each of those computer-controlled mirrors tracks the sun's position on two axes. The heliostats are set up so that over the course of a day, they efficiently focus that light towards a receiver at the top of the tower.

How long does it take to build a solar plant in Mojave Desert?

Insolation (solar radiation) in the Mojave Desert is among the best available in the United States, and some significant population centers are located in the area. These plants can generally be built in a few years because solar plants are built almost entirely with modular, readily available materials.

There are several solar power plants in the Mojave Desert which supply power to the electricity grid. Insolation (solar radiation) in the Mojave Desert is among the best available in the United States, and some significant population centers are located in the area. These plants can generally be built in a few years because solar plants are built almost entirely with modular, readily available materials.
