

Desert photovoltaic panel transportation plan drawings

Are desert areas suitable for building photovoltaic power stations?

As is shown in Fig. S1, most desert areas are suitable for building photovoltaic power stations when considering three factors: slope, distance from fresh water resources, and solar irradiation, especially deserts in Australia and Africa.

Does PV power station deployment affect desert vegetation?

Previous remote sensing studies of a few PV power stations have demonstrated that the PV power station deployment does not significantly alter desert vegetation (Edalat and Stephen, 2017; Potter, 2016).

Do large-scale PV panels change vegetation in desert areas?

At the macro level, there is still a lack of understanding and evidence of vegetation changes in desert areas resulting from large-scale PV panel deployment, partly because large-scale field surveys can be costly and time-consuming.

Does photovoltaic development improve environmental conditions in desert areas?

Photovoltaic development in desert areas has significantly improved local ecological and environmental conditions. At the WPS, the Status and Impact scores were 0.182 and 0.11, respectively, indicating a significant impact on the ecological environment of the study area.

How can photovoltaic energy be made up by Transcontinental power transmission?

The local imbalanced diurnal generation of photovoltaic energy can be made up by transcontinental power transmission from other power stations in the network to meet the hourly electricity demand.

Can desert photovoltaic power replace coal-fired power?

In the future carbon-neutral scenario, photovoltaic power from deserts is one of the optimal choices to completely replace coal-fired power (12). Large desert photovoltaic power stations have been successfully and repeatedly practiced in the world.
