

The installations of photovoltaic (PV) solar modules are growing extremely fast. As a result of the increase, the volume of modules that reach the end of their life will grow at the same rate in the near future. It is expected that ...

The article presents the developed technology for the comprehensive recycling of depleted, used or damaged photovoltaic (PV) cells made of crystalline silicon. The developed ...

Sustainability 2024, 16, 526 2 of 23 years due to the significant rise in the production and use of PV solar panels since the late 20th Century [7,10]. In WA, 392,572 houses out of 1,070,962 ...

As the solar photovoltaic market booms, so will the volume of photovoltaic (PV) systems entering the waste stream. The same is forecast for lithium-ion batteries from electric vehicles, which at the end of their automotive ...

of PV panels with a lower environmental impact. The project has been developed through several phases: in the first one, the design of the new recycling method and the execution of tests on ...

Different methods of recycling the photovoltaic panels mentioned in the literature (Libby et al., 2018; Garlapati, 2016; Latunussa et al., 2016) andra et al. (2019) presents the ...

Appl. Sci. 2022, 12, 9092 3 of 19 Appl. Sci. 2022, 12, 9092 3 of 19 old wind turbines, batteries and solar panels must be disposed of or recycled in the next decade along with millions of tons ...

The article presents the developed technology for the comprehensive recycling of depleted, used or damaged photovoltaic (PV) cells made of crystalline silicon. The developed concepts of technology and the ...

As the solar photovoltaic market booms, so will the volume of photovoltaic (PV) systems entering the waste stream. The same is forecast for lithium-ion batteries from electric ...

In this paper, we overview the current status of photovoltaics recycling planning and discuss our mathematic modeling of the economic feasibility and the environmental viability of several PV recycling infrastructure ...

The rapid proliferation of photovoltaic (PV) modules globally has led to a significant increase in solar waste production, projected to reach 60-78 million tonnes by 2050.

This study proposes a reverse logistical planning framework for collecting end-of-life PV panels, which aims

to support the integration of existing recycling technologies and ...

On the basis of the method for managing the end of life of CdTe photovoltaic panels previously proposed by the authors, a new method for the recycling of all types of thin ...
