

Does the United States use lithium batteries for energy storage

Why should the United States invest in a lithium battery supply chain?

With the global lithium battery market expected to grow by a factor of five to ten by 2030, it is imperative that the United States invests immediately in scaling up a secure, diversified supply chain for high-capacity batteries here at home.

How many lithium-ion battery companies are there in North America?

As of March 2024, the database now offers a directory of nearly 700 companies and 850 facilities in North America across lithium-ion battery supply chain segments, including mining, material processing, cell and pack manufacturing, research and development, services, end-of-life management, and product distributors.

What should the US do about lithium-ion batteries?

The U.S. should develop a federal policy framework that supports manufacturing electrodes, cells, and packs domestically and encourages demand growth for lithium-ion batteries. Special attention will be needed to ensure access to clean-energy jobs and a more equitable and durable supply chain that works for all Americans.

What is the lithium-ion battery supply chain database?

As part of ongoing efforts to map the battery landscape, NABATT International and NREL established the Lithium-Ion Battery Supply Chain Database to identify every company in North America involved in building lithium-ion batteries, from mining to manufacturing to recycling and everything in between.

Why are lithium-based batteries important?

Lithium-based batteries power our daily lives from consumer electronics to national defense. They enable electrification of the transportation sector and provide stationary grid storage, critical to developing the clean-energy economy.

What is the largest lithium-ion battery installation in the world?

One example is the Hornsdale Power Reserve, a 100 MW/129 MWh lithium-ion battery installation, the largest lithium-ion BESS in the world, which has been in operation in South Australia since December 2017. The Hornsdale Power Reserve provides two distinct services: 1) energy arbitrage; and 2) contingency spinning reserve.
