

Dual voltage controller for photovoltaic panels

What types of solar charge controllers are available?

We feature a wide range of both MPPT and PWM solar charge controllers. See the BlueSolar and SmartSolar Charge Controller MPPT - Overview. In our MPPT model names, for example MPPT 75/50, the first number is the maximum PV open circuit voltage. The second number, 50, is the maximum charge current.

What is the best MPPT solar charge controller?

The best MPPT solar charge controllers up to 40A including Victron, Epever, Morningstar and Renogy Rover. Unlike battery inverters, most MPPT solar charge controllers can be used with various battery voltages from 12V to 48V.

What is a DC-coupled solar charge controller?

DC-coupled solar charge controllers have been around for decades and are used in almost all small-scale off-grid solar power systems. Modern solar charge controllers have advanced features to ensure the battery system is charged precisely and efficiently, plus features like DC load output used for lighting.

Are PWM solar charge controllers good?

PWM solar charge controllers are quite cheap, and ideal for small-scale PV systems. Since these charge controllers operate at an efficiency of 75-80%, they can produce 25-20% power losses to the system. How do MPPT solar charge controllers work?

Can a solar charge controller be used on a 120V battery?

A select few, such as the Victron 150V range, can be used on all battery voltages from 12V to 48V. Several high-voltage solar charge controllers, such as those from AERL and IMARK, can be used on 120V battery banks. Besides the current (A) rating, the battery voltage also limits the maximum solar array size connected to a solar charge controller.

Do solar panels need a charge controller?

However, you should equip every solar panel and battery that puts out more than this general standard with a charge controller. That will regulate the output and efficiency of your system. Most battery bank voltage falls within the 12-48VDC range, which the charge controller will need to match in output.
