Do you need a solar panel for a 4WD?

For us, the ultimate setup is a solar panel (or several) bolted to your 4WD that produces more than enough power to keep your battery healthy even over periods where you aren't driving, or its overcast. If you aren't sure of whether to go for fixed or portable solar panels, we have a post covering it in detail.

Are solar panels a good accessory for a 4WD?

Solar panels have become a very common accessory on a 4WD, especially if you travel off grid on a regular basis. Technology improvements have allowed us to take a fridge, inverter and even a coffee machine or microwave and power it almost entirely off a good battery system and solar panel.

Are fixed solar panels good for a 4WD?

Fixed solar panels for a 4WD are great, when you mount them sensibly; think about shading, protection, flex and the cable runs (which we go into below).

How do I determine solar panel performance?

Identify potential sources of shading that may affect solar panel performance using shading analysis using tools like a Solar Pathfinder or online shading calculators. Note the presence of trees, buildings, or other obstructions that cast shadows on the proposed solar panel location.

How do you mount a solar panel on a car?

The most common way though, is to mount a solar panel is to bolt it straight to the roof racks. Alternatively, a lot of people are buying the flexible panels that are much lighter, and just gluing them down to the roof of the vehicle, or spacing it out with some corflute material to reduce the temperatures of the panel.

How do you mount a solar panel on a roof rack?

There are lots of ways to mount solar panels. You can buy specific corner brackets made of plastic that screw into the solar panel, and then bolt onto a roof rack. The most common way though, is to mount a solar panel is to bolt it straight to the roof racks.
