What is an energy management system?

Used effectively, an Energy Management System can be a pivotal lever to pull on to reduce operational costs for sites using energy storage. Its cost-effectiveness lies in the following key functions that require optimum programming. EMS provides constant monitoring of all energy-related systems and processes.

Why is the EMS subscription so expensive?

The EMS subscription is expensive (more than 1% of annual revenue). The EMS is causing downtime (EMS availability of less than 99% is detrimental). The EMS has cybersecurity concerns or is not addressing foreign equipment risks (e.g., cyber attack through the BMS).

What can EMS do for You?

With applications for state estimation, load flow, optimal power flow, contingency analysis, fault calculation, optimal topology change, performance indices, and voltage stability, our EMS allows utilities to better visualize, operate, optimize, and maintain transmission and subtransmission networks.

When selecting an EMS, consider the size of your business, the complexity of your energy needs, and the specific benefits you seek from incorporating battery storage. For businesses with fluctuating energy demands or those looking to ...
