

What are the different types of thermal energy storage systems?

Thermal energy storage (TES) systems store heat or cold for later use and are classified into sensible heat storage, latent heat storage, and thermochemical heat storage. Sensible heat storage systems raise the temperature of a material to store heat. Latent heat storage systems use PCMs to store heat through melting or solidifying.

What are thermal energy storage materials for chemical heat storage?

Thermal energy storage materials for chemical heat storage Chemical heat storage systems use reversible reactions which involve absorption and release of heat for the purpose of thermal energy storage. They have a middle range operating temperature between 200 °C and 400 °C.

What is a sensible heat thermal energy storage material?

Sensible heat thermal energy storage materials store heat energy in their specific heat capacity (C_p). The thermal energy stored by sensible heat can be expressed as $Q = m \cdot C_p \cdot \Delta T$ where m is the mass (kg), C_p is the specific heat capacity ($\text{kJ} \cdot \text{kg}^{-1} \cdot \text{K}^{-1}$) and ΔT is the raise in temperature during charging process.

What is heat storage material type based TES system?

Heat storage material type based TES systems A wide variety of materials are being used for thermal energy storage. TES materials must possess suitable thermo-physical properties like favorable melting point for the given thermal application, high latent heat, high specific heat and high thermal conductivity etc.

What is heat storage in a TES module?

Heat storage in separate TES modules usually requires active components (fans or pumps) and control systems to transport stored energy to the occupant space. Heat storage tanks, various types of heat exchangers, solar collectors, air ducts, and indoor heating bodies can be considered elements of an active system.

What is thermal energy storage?

Thermal energy storage is a key function enabling energy conservation across all major thermal energy sources, although each thermal energy source has its own unique context. 1.1. Heat sources 1.1.1.
