What is a battery energy storage system?

Battery energy storage system (BESS): Consists of Power Conversion Equipment (PCE), battery system(s) and isolation and protection devices. Battery system: System comprising one or more cells, modules or batteries. Pre-assembled battery system: System comprising one or more cells, modules or battery systems, and/or auxiliary equipment.

How do I plan a battery energy storage system?

Conduct an analysis of the customer's current energy costs based on customer electricity bills. Depending on the purpose of the battery energy storage system, include a description of how the proposed battery energy storage system is expected to impact/change the customer energy usage and electricity costs.

What equipment do I need to install a battery energy storage system?

Any bollards required to be installed in front of battery energy storage system. Safety exclusion zone around battery energy storage system if required. Location of main switchboard. Any other existing NET on site.

What are the customer requirements for a battery energy storage system?

Any customer obligations required for the battery energy storage system to be installed/operated such as maintaining an internet connection for remote monitoring of system performance or ensuring unobstructed access to the battery energy storage system for emergency situations. A copy of the product brochure/data sheet.

How can a battery energy storage system reduce reliability on the grid?

Reduce reliability on the grid: When the battery energy storage system is fully charged, how many loads can be supplied by the energy storage system when it is fully charged for a set period of time.
