

Can energy management system manage a battery energy storage system?

Multiple such systems can be aggregated to improve flexibility of the system. In this paper, an Energy Management System (EMS) that manages a Battery Energy Storage System (BESS) is implemented.

What is an EMS & how does it work?

On top of that, an EMS facilitates the seamless integration of renewable energy sources, such as solar and wind, into the grid. By prioritizing the use of renewable energy when available, an EMS reduces the need for fossil fuels, which is the main culprit for carbon emissions.

Why do businesses need EMS?

The ability to provide real-time monitoring, predictive maintenance, optimised energy consumption, and integration of renewable energy sources makes EMS an indispensable asset for businesses looking to enhance their energy efficiency and financial performance. EMS installation offers several advantages beyond the immediate financial savings.

What type of batteries are used in stationary energy storage?

For this blog, we focus entirely on lithium-ion (Li-ion) based batteries, the most widely deployed type of batteries used in stationary energy storage applications today. The International Energy Agency (IEA) reported that lithium-ion batteries accounted for more than 90% of the global investment in battery energy storage in 2020 and 2021.

An EMS will also coordinate and optimize the operation of solar arrays, electric vehicle chargers, energy storage, and other clean energy assets that may be installed on site -- maximizing the ...
