

# Energy storage fire protection system training content

Do fire departments need better training to deal with energy storage system hazards?

Fire departments need data, research, and better training to deal with energy storage system (ESS) hazards. These are the key findings shared by UL's Fire Safety Research Institute (FSRI) and presented by Sean DeCrane, International Association of Fire Fighters Director of Health and Safety Operational Services at SEAC's May 2023 General Meeting.

What should first responders know about energy storage systems?

This document provides guidance to first responders for incidents involving energy storage systems (ESS). The guidance is specific to ESS with lithium-ion (Li-ion) batteries, but some elements may apply to other technologies also. Hazards addressed include fire, explosion, arc flash, shock, and toxic chemicals.

What is battery energy storage fire prevention & mitigation?

In 2019, EPRI began the Battery Energy Storage Fire Prevention and Mitigation - Phase I research project, convened a group of experts, and conducted a series of energy storage site surveys and industry workshops to identify critical research and development (R&D) needs regarding battery safety.

How can I improve fire safety with ESS?

In addition, you can join a SEAC working group, including the Storage Fire Detection working group and the ESS Standards working group, that's working to improve fire safety with ESS. Lastly, join SEAC for a virtual workshop on safety and risk considerations when permitting ESS.

What is an energy storage system?

Powering the Future: Safeguarding Today with Energy Storage Systems According to the National Fire Protection Association (NFPA), an energy storage system (ESS), is a device or group of devices assembled together, capable of storing energy in order to supply electrical energy at a later time.

What is an energy storage roadmap?

This roadmap provides necessary information to support owners, operators, and developers of energy storage in proactively designing, building, operating, and maintaining these systems to minimize fire risk and ensure the safety of the public, operators, and environment.

bodies. Ultimately, energy storage safety is ensured through engineering quality and application of safety practices to the entire energy storage system. Design and planning to prevent ...

International Fire Code (IFC): The IFC outlines provisions related to the storage, handling, and use of hazardous materials, including those found in battery storage systems. UL 9540: ...

# Energy storage fire protection system training content

Battery Energy Storage System Incidents ... emergency planning, and annual training. (The 2021 International Fire Code (IFC) [B2] has language that has been largely harmonized with NFPA ...

This document provides guidance to first responders for incidents involving energy storage systems (ESS). The guidance is specific to ESS with lithium-ion (Li-ion) batteries, but some ...

Thermal runaway in lithium batteries results in an uncontrollable rise in temperature and propagation of extreme fire hazards within a battery energy storage system (BESS). It was ...

NFPA 855 is an essential standard to follow to maintain worker safety while around stationary energy storage systems. 1-866-777-1360 M-F 6am - 4pm PST Mon-Fri, 06:00 - 16:00 ... The ...

This guide serves as a resource for emergency responders with regards to safety surrounding lithium ion Energy Storage Systems (ESS). Each manufacturer has specific response guidelines that should be made available ...

NFPA 855, the International Fire Code, and other standards guide meeting the safety requirements to ensure that Battery Energy Storage Systems (BESS) can be operated safely. FRA employees are principal members of NFPA 855 and ...
