

How do I connect ecostore to the grid?

The EcoSTORE is connected in shunt(parallel) to the grid,so the connection wiring diagram can be identical to the EcoVAR. EcoJoule recommends connection to the mains via 63A fuses and/or isolator or circuit breaker. This is to provide an easy means to isolate the unit.

How do I prevent a solar charger from feeding energy to the grid?

Policy 4: Prevent feeding energy to the grid: There are two options here; first - use ESS,but do not enable Solar charger excess feed-in and it will always be connected to the grid. Or,use the Virtual Switch with ignore AC-Input. Policy 5: Connected to mains,no feedback: Use ESS,select the "Keep batteries charged" mode.

What happens if a power grid fails?

That stored energy is then used later,to power the loads at times when there is a shortage of PV power. Failures of the utility grid are the only periods at which the battery will be discharged. Once the grid is restored,the batteries will be recharged with power from the grid,and of course also solar,when available.

How does ESS work if a utility grid fails?

ESS can also be configured to keep the batteries fully charged. A utility grid failure is then the only time battery power is used as a backup. Once the grid is restored,the batteries will be recharged either from the grid or from solar panels when available.

What type of inverter/charger does the energy storage system use?

The Energy Storage System uses a MultiPlus or Quattro bidirectional inverter/charger as its main component. Note that ESS can only be installed on VE.Bus model Multis and Quattros which feature the 2nd generation microprocessor (26 or 27). All new VE.Bus Inverter/Chargers currently shipping have 2nd generation chips.

Does ESS work with a grid-tie inverter?

ESS can work with either an MPPT Solar Charger,a grid-tie inverter,or a mix of both. Generally speaking,the MPPT Solar Charger will be more effective than a grid-tie inverter in a small system.
