

What materials are needed to make lithium ion batteries?

There are seven main raw materials needed to make lithium-ion batteries. Among these, the US defines graphite, lithium, nickel, manganese, and cobalt as critical minerals: metals of essential importance to US energy needs, but which have supply chains vulnerable to disruption.

Which raw materials are used in Li-ion batteries?

Critical raw materials in Li-ion batteries Several materials on the EU's 2020 list of critical raw materials are used in commercial Li-ion batteries. The most important ones are listed in Table 2. Bauxite is our primary source for the production of aluminium. Aluminium foil is used as the cat

What minerals are used to make lithium ion batteries?

As a result of these developments, the transition to clean energy technologies is projected to drive demand for many raw critical minerals, such as lithium (Li), cobalt (Co) and nickel (Ni), for lithium-ion batteries used in EVs.¹ These critical materials are used to fabricate cathodes for lithium-ion batteries.

Are lithium-based batteries a viable industrial base?

A robust, secure, domestic industrial base for lithium-based batteries requires access to a reliable supply of raw, refined, and processed material inputs along with parallel efforts to develop substitutes that are sustainable and diversify supply from both secondary and unconventional sources.

Are lithium-ion batteries critical materials?

Given the reliance on batteries, the electrified transportation and stationary grid storage sectors are dependent on critical materials; today's lithium-ion batteries include several critical materials, including lithium, cobalt, nickel, and graphite.¹³ Strategic vulnerabilities in these sources are being recognized.

Should lithium-based batteries be a domestic supply chain?

Establishing a domestic supply chain for lithium-based batteries requires a national commitment to both solving breakthrough scientific challenges for new materials and developing a manufacturing base that meets the demands of the growing electric vehicle (EV) and electrical grid storage markets.
