

Is solar power a competitive source of electricity in the EU?

The cost of solar power decreased by 82% between 2010-2020, making it the most competitive source of electricity in many parts of the EU. The EU solar generation capacity keeps increasing and reached, according to SolarPower Europe, an estimated 259.99 GW in 2023. The EU has long been a front-runner in the roll-out of solar energy.

How much solar power does the EU produce?

The production volume of electricity from solar photovoltaic power in the European Union has been steadily increasing in the last years. In 2023, the EU's solar PV power production stood at over 240 terawatt hours.

How does solar energy work in Europe?

Solar power consists of photovoltaics (PV) and solar thermal energy in the European Union (EU). In 2010, the EUR 2.6 billion European solar heating sectors consisted of small and medium-sized businesses, generated 17.3 terawatt-hours (TWh) of energy, employed 33,500 workers, and created one new job for every 80 kW of added capacity. [1]

What is the European solar PV industry alliance?

The European Solar PV Industry Alliance was by the Commission together with industrial actors, research institutes, associations and other relevant parties on 9 December 2022 to support the objectives of the EU's Solar Energy Strategy.

Is solar energy the fastest growing energy source in the EU?

Solar energy, the fastest-growing energy source in the EU, saw an 82% cost reduction between 2010 and 2020. Solar capacity expanded from 164.19 GW in 2021 to an estimated 259.99 GW by 2023. [2]

What percentage of EU electricity is generated by wind & solar?

For the first time, more than a quarter of EU electricity (27%) was provided by wind and solar in 2023, up from 23% in 2022. This drove renewable electricity to a record high of 44%, passing the 40% mark for the first year in the EU's history. Combined wind and solar generation increased by a record 90 TWh and installed capacity by 73 GW.

Electrical capacity for solar was 700 times higher in 2019 than in 2000. The EU is working to increase its share of renewable resources in gross final energy consumption in line with the European Green Deal and the EU's ...

2.2 Regional yield calculation. The European Commission Joint Research Centre has produced an interactive Photovoltaic Geographic Information System (PVGIS) that enables the solar PV yield at any location in ...

The Distributed Solar Power Generation Market is expected to reach USD 149.72 billion in 2024 and grow at a CAGR of 6.97% to reach USD 209.69 billion by 2029. Suntech Power Holdings ...

Trinasolar spoke to PV Tech ahead of the Large Scale Solar Central Eastern Europe event about the PV potential in Eastern Europe. Europe to install 110GW of solar in 2025 - S&P November 11, 2024

Fossil generation plummeted by a record 19% (-209 TWh) in 2023, to account for less than a third of the EU's electricity mix for the first time. Coal generation fell by 26% (-116 TWh) to its lowest level ever (333 TWh), ...
