What are the basic components of a solar system?

Regardless of a given system's capacities and specifications, there's a common thread among most of them: The basic building blocks of its major components. 1. Solar panels 2. Charge controller 3. Battery bank (if off-grid or standalone system) 4. DC to AC inverter for AC power I'm posting this for the beginner or the curious. The basic diagram.

How do on-grid solar systems work?

In addition, the user can buy energy from the grid if needed. In the basic scheme of an on-grid PV solar system, it must have the following parts: An array of solar panels to transform solar radiation into electrical energy. A solar inverter that transforms the DC power generated by the solar array panels into AC power.
