

Gasoline generator wind switch direction

How do you use a fuel selector switch?

Position the fuel selector switch on the front control panel to the desired fuel choice. Turn the fuel selector switch fully upward for gasoline operation. Turn the fuel selector switch fully downward for propane operation. For proper break-in, DO NOT exceed 50% of the rated running watts (2650 watts) during the first five hours of operation.

Can you fill a generator with gasoline?

Store fuel in a container approved for gasoline. DO NOT smoke when filling the generator with gasoline. DO NOT allow the generator's gas tank to overflow when filling. Shut down the engine and allow it to cool for two minutes before adding gasoline or oil to the generator. NEVER remove the fuel cap when the generator is running.

How do you run a gas generator on a propane tank?

Make sure the LPG/propane hose is correctly connected to the generator and propane tank. Turn the fuel selector switch to propane operation. Fully open the valve on the propane tank. Push the Run/Stop switch to the Run position. Firmly grasp and pull the recoil handle slowly until you feel increased resistance, then pull rapidly.

How does a generator transfer switch work?

The transfer switch is installed beside the main electrical panel, then it's connected to the appliances and circuits you think you'll want running during a blackout. When the power goes out, you simply crank up the generator and run an extension cord from it to the transfer switch.

How do I connect a Westinghouse generator to a panel board transfer switch?

CONNECTIONSThe Westinghouse generator is wired with the neutral bonded to ground. If you are connecting your generator to a panel board transfer switch, a licensed electrician will need to consider removing the bonded neutral to ensure proper operation of household GF I circuits. Begin by removing the alternator cover (14

How do I connect a propane hose to a generator?

Remove the cover on the generator propane inlet valve. Use your fingers to hand thread the LPG/propane hose (included) to the propane inlet on the generator. **IMPORTANT: DO NOT** use thread seal tape or any other type of sealant to seal the LPG/propane hose connection.
