

Generator air inlet and exhaust sound insulation panels

Are spark-ignited generator enclosures sound-attenuated or weather-protective?

Spark-ignited generator set enclosures Sound-attenuated and weather-protective enclosures from Cummins Power Generation Inc. meet even the strictest sound requirements and provide optimum protection from inclement weather.

How do generator set manufacturers design sound-attenuating enclosures?

Generator set manufacturers use these concepts when designing sound-attenuating enclosures: Acoustic Barrier- Enclosures constructed of steel panels. Electrical, fuel pipes and any other auxiliary entries must be sealed. Acoustic Insulation - Sound absorbing insulation in/on interior panels.

Will a sound attenuated enclosure work with multiple generator sets?

When sizing multiple enclosures for more than one generator set, whether it is a sound attenuated or weatherproof enclosure, it is advisable to make a decision based upon the worst case data so that the sound attenuated enclosures will work with all generator sets considered for the project.

How do you muffle noise from a generator?

The most common device used to muffle noise from generators is acoustical enclosures. Typical sound attenuated generator enclosures consist of panels that are multi-layered composite treatments comprising of an impervious exterior layer as well as a layer of porous sound absorption material facing towards the inside of the equipment.

How does sound attenuation affect a generator?

Any amount of sound attenuation applied to a generator set will alter the noise produced by the engine and yield a more tolerable deadened sound characterized by a rush of air rather than a mechanical or fan noise of a high-speed diesel or gas engine.

Does Cummins Power Generation offer sound-attenuated & weather-protective enclosures?

Sound-attenuated and weather-protective enclosures from Cummins Power Generation Inc. meet even the strictest sound requirements and provide optimum protection from inclement weather. Cummins Power Generation diesel and spark-ignited generator sets are available with sound-attenuated and weather-protective enclosures.

The IATC Industrial Silencer Series is suitable for many medium to heavy-duty industrial applications where it is desirable to reduce the air turbulence noise emanating from an air handling system. Introducing only a modest pressure ...

This is achieved through the installation of intake louvers, exhaust fans, and ducting systems. Effective

Generator air inlet and exhaust sound insulation panels

ventilation helps dissipate heat generated by the generator and prevents the build-up ...

Includes all of the sound level 1 enclosure features with the addition of up to 51 mm (2 in.) acoustic insulation material, intake sound baffles, secondary silencers, and vertical air ...

The exhaust system plays a pivotal role in noise emissions, especially in diesel-powered units. Unmuffled exhaust gases escaping the generator can produce considerable noise levels, particularly if the exhaust ...

Megasorber's specialists can assist in designing an enclosure that incorporates sound mazes into the air inlet and exhaust systems. As an example, typical Megasorber designs are shown below. Pre-cut to shape kits for simple and ...

Depending on the combination of steps you take, it's possible to reduce generator noise by anywhere from 1 decibel (ineffective treatment) to over 20 decibels. These basic steps should ...

Acoustic Insulation - Sound absorbing insulation in/on interior panels. Isolation Mounts - Generator, engine and auxiliary support components are connected using isolation mounts. Cooling Air Attenuation - Baffles installed into air ...

Generator sound insulation cover ALPHAFon - IC is used for noise control of the small and big sized generators to minimize the emission of noise in generation sets. The frame of the product is made out of standardized aluminum or of a ...

Step 4 - Glue and Caulk the First Layer of Sound Deadening Insulation. The key to sound insulation is adding layers of free space that allows the sound to dissipate. The best way to ...

Critical Grade - Exhaust noise reduction of 25 to 32 dBA. Super Critical Grade - Exhaust noise reduction 30 to 38 dBA. Hospital Grade - Exhaust noise reduction of 35 to 42 ...

o Cooling/combustion air intake. Fixed air intake louvers. o Sound-attenuating design using additional secondary silencers and up to 51 mm (2 inches) of added acoustic insulation, UL 94 ...
