

Generator room air inlet and outlet silencer

Why did noise control need a generator room silencer?

The Genset Building, located in close proximity to the guest rooms, required sound attenuation due to potential long term operation and frequent system tests. eNoise Control was contacted for help with the generator room silencers.

What is a discharge silencer on a generator?

Vibro-Acoustics' discharge silencers reduce noise transmission through the air exhaust openings of the generator. There are many options to save space and minimize pressure drop. Transitional silencers and full-height baffles are two examples. No two generator applications are the same.

Does a generator need a silencer?

Depending on your facility's environment, the application, and local ordinances, you may require an advanced level of silencing, or minimal sound dampening may suffice. If a new generator set is of an open configuration, it typically will not come with a silencer, but many manufacturers offer them as accessories.

Is there a standard for silencers used in electrical generating systems?

While there are standards addressing silencers for heating, ventilating, and air-conditioning (HVAC) duct and on-highway engines, there is no industry accepted guideline for silencers used in electrical generating systems. EGSA members recognized this deficiency and expressed a need to develop a more uniform silencer rating criteria.

What are the different types of generator silencers?

Generator silencers come in a wide variety of designs that vary in the way they work, their size and shape, and a few other features. The main types are: Reactive silencers, mute sound by bouncing it around inside one or multiple chambers. This design works best for low to moderate noise level demands.

What are the different types of absorptive silencers?

Absorptive silencers include lined duct attenuators, packaged cylindrical and rectangular attenuators, acoustic louvers and lined plenum chambers. Ambient Noise (Background): Ambient noise is the pervasive noise associated with a given environment, usually a composite of sounds from sources both near and distant.
