Does distributed photovoltaic provide output data when connected to power grid?

Distributed photovoltaic does not provide output data when it is connected to power grid due to cost constraints, which adversely affects power grid dispatching.

Can photovoltaic energy be transferred to the electricity grid?

DC/AC conversion of photovoltaic energy is in great demand for AC applications; the supply of electrical machines and transfer energy to the distribution network is a typical case. This work is realized in this context and presents a new structure for the transfer of photovoltaic energy to the electricity grid.

Background In recent years, solar photovoltaic technology has experienced significant advances in both materials and systems, leading to improvements in efficiency, cost, and energy storage capacity.
