

# How long can a multi-point locker store

Why do you need a multi-point locking system?

Entry doors - Front and back doors are often the primary targets for break-ins, and using a multi-point locking system significantly reinforces security. By engaging multiple locking points, such as hooks, bolts, and rollers, along the door frame, multi-point locks make it extremely difficult for burglars to force the door open.

Are multi-point locks a good choice?

This ensures that the doors remain securely shut and are resistant to tampering. Timber doors - Multi-point locks are an excellent choice for timber or wooden doors, providing modern security features while preserving the traditional look of the door.

What is a patio door multi point locking system?

Patio door multi-point locking system - Patio doors, especially sliding ones, benefit from multi-point locks. These locks secure the door at multiple points along the track, providing comprehensive security and preventing unauthorised access. The locks themselves also come with different mechanisms.

Can a multipoint lock be used on a sliding door?

Multipoint locking systems can be used with most entry doors, french doors, and sliding glass doors. Typically, multipoint locks are installed on hinged doors, and require a separate system for sliding doors. If you're not sure which multipoint options are available to you, contact us, we're here to help!

What is a French door multi-point locking system?

French door multi-point locking system - This type of multi-point lock is explicitly designed for French doors. It typically features shoot bolts or tongue locks that extend from the top and bottom of one door into the frame of the other door when locked. This enhances security and prevents the doors from being forced open.

Can a multipoint locking system be installed on existing doors?

In general, installing multipoint locking systems on existing doors is not recommended. When the system is created with the door, a sleek and seamless exterior is achieved. It isn't impossible, but it is likely that there will be damage to the entry system, and parts of the mechanism may not lay flush.
