Can you store medications in a medicine cabinet?

DON'T Store medication in the medicine cabinet or the bathroom cabinet. Although it is named as if it is ideal for storing meds, a medicine cabinet is actually among the worst options. Why? Excessive heat, humidity, and temperature changes that occur in most bathrooms can damage medications, which may decrease their effectiveness.

What temperature should a medicine be stored?

Some medicines require storage at less than 15°C. Since most services do not have a cool room a refrigerator would probably provide appropriate storage for such products, provided that storage below 8°C does not affect the medicine. The requirement to store medicines at 25°C or below can usually be satisfied by room temperature storage.

Where should medications be stored?

To protect your medications, store them in a cool, dry place like a dresser drawer or kitchen cabinet--so long as it's not near the sink or above the stove or other hot appliances like your toaster. Other options to consider could be keeping medicine in a lockable storage box on a shelf or a cool, dry closet. Follow instructions.

Can a medicine be stored in a fridge?

The medicines container in the domestic fridge should not be accessible to service users. Some medicines require storage at less than 15°C. Since most services do not have a cool room a refrigerator would probably provide appropriate storage for such products, provided that storage below 8°C does not affect the medicine.

What temperature should medication be stored in a car?

It's not just hotter temperatures that can damage medications. The general safe room temperature for medication storage is between 59 and 77 degrees F. Medicine shouldn't be frozen, so be careful of leaving it in a car or other really cold place. For example, insulin, which is a protein, can become unstable when frozen.

How do you store a medicine if it expires?

A cabinet, cupboard or medicine box is ideal for this purpose. Store medicine in its original packaging and keep it sealed prior to use. Tablets that are packaged in blister packs are still classified as sealed, even if the outer packaging has been opened. If you open medicine in a bottle, use it before it reaches the expiration date.

Storage conditions for most medicines can be satisfied by either cold storage (between 2-8°C) OR storage that is not above 25°C (although some medicines now suggest storage not above 30°C).
