

How long does it take for Northwest solar power to pay back

How long does it take for solar panels to pay back?

The amount of time it takes for the energy savings to exceed the cost of installing solar panels is known as the payback period or break-even period. A typical payback period for residential solar is 7-10 years, although it varies depending on your utility rates, incentives, system size, and other factors.

What is a solar payback period?

The solar payback period represents the amount of time it takes to recoup the cost of installing your solar system. Depending on your installer, the number of solar panels you install, and how you pay for your system, the length of your solar payback period will vary. The average solar payback period for EnergySage customers is under eight years.

How do solar panels pay back?

If you'd rather skip the long explanations and math equations, you can calculate the payback period for your specific home now by using our solar panel payback calculator: Solar panels pay for themselves over time by saving you money on electricity bills, and in some cases, earning you money through ongoing incentive payments.

How long does a solar energy payback last?

Palz and Zibetta also calculated an energy payback of about 2 years for current multicrystalline-silicon PV. For single-crystal silicon, which Alsema did not calculate, Kato calculated a payback of 3 years when he did not charge for off-grade feedstock.
