Do solar panels come with a solar connector?

Solar panels do not always come with the solar connector attached. Attaching a solar panel connector to a PV wire is a two-step process: (1) crimping and (2) tightening the connector, to do this you require a wire stripper, crimping tool, and a solar panel connector assembly tool.

Do solar panels need mounts?

Solar panel mounts are a common component of almost every solar panel array. Although there are newer solar panel technologies coming out that do not require mounts, such as the Lumeta solar module that are being developed, the majority of solar panel arrays on the market and the ones already installed will require this feature.

What is a solar panel mount?

The purpose of a solar panel mount is to serve as a foundation for a solar panel. Mounting systems allow for solar panel arrays to be positioned in the most effective location to maximize the panel's exposure to sunlight. The type of solar panel mounts will vary widely depending on the rooftop or surface type where it is being installed on.

How do I install a solar PV system?

Install a mounting system for solar thermal or solar photovoltaic panels. Consider the roof type (material and slope), weatherproofing, installation convenience, and wind and snow loadings. Choose an appropriate racking and mounting system for the type of PV module, and install the system along with needed flashing and seals.
