

How much does Fengli power generation equipment cost

What is the cost structure of electricity generation technologies?

Cost structure of generation technologies. Electricity generation technologies vary dramatically in their cost structure. Some plants, such as nuclear, wind and solar power, have virtually zero variable costs: once they are built, they produce electricity virtually for free. This is in stark contrast to fossil fuel-based power plants.

How much does a small modular reactor cost in Utah?

Last week, NuScale and the Utah Associated Municipal Power Systems (UAMPS) announced what many have long expected. The construction cost and target price estimates for the 462-megawatt (MW) small modular reactor (SMR) are going up, way up. From 2016 to 2020, they said the target power price was \$55/megawatt-hour (MWh).

What are fixed costs in a power plant?

Fixed costs are the cost of equipment, land, financing, project management, grid connection, and construction of the power plant. These are usually expressed per unit of installed capacity (per kW or per MW). Fixed costs are regarded as "sunk costs", because once the plant is erected and fixed costs are incurred they cannot be recuperated.

What is the least cost option for a power plant?

For example in Figure 5, if a power plant is meant to be used 2,000 hours per year or less, the least-cost option is a natural gas-fired power plant. If it is used more than 2,000 hours but less than 8,000 hours, the least cost option is a coal-fired power plant.

How much does a small modular reactor cost?

The construction cost and target price estimates for the 462-megawatt (MW) small modular reactor (SMR) are going up, way up. From 2016 to 2020, they said the target power price was \$55/megawatt-hour (MWh). Then, the price was raised to \$58/MWh when the project was downsized from 12 reactor modules to just six (924MW to 462MW).

How much does a power plant onsite switchyard cost?

The power plant's onsite switchyard is connected to the transmission system through a nearby substation. The base cost estimate for this technology case totals \$1563/kW. Table 19-1 summarizes the cost components for this case. \$/kW net 1,563
