

How much is the smart microgrid franchise fee

How much does a microgrid controller cost?

Controller costs per megawatt range from \$3,500/MW to nearly \$600,000/MW(excluding outliers),with a mean of \$85,000/MW. The analysis shows that controller costs as a percentage of total microgrid costs are relatively similar among the projects in our database and the NY Prize data despite the wide variety of system sizes,types,and uses.

What is a microgrid cost model?

The National Renewable Energy Laboratory was commissioned by the U.S. Department of Energy to complete a microgrid cost studyand develop a microgrid cost model. The goal of this study is to elucidate the variables that have the highest impact on costsas well as potential areas for cost reduction. This study consists of two phases.

What percentage of microgrid costs are soft costs?

Soft costs,which include interconnection,financing,engineering,procurement,and construction management,range from 0.4%-1.6% of total microgrid costs,as shown in Figure 24. Figure 25 shows the total percentage of soft costs in relation to total microgrid costs.

How much does a microgrid cost per megawatt?

The community microgrid market has a mean cost of \$2.1 million per megawattof DERs installed.

How much does energy storage cost a microgrid?

In commercial and industrial microgrids,energy storage represents 15% and 25% of the total costs per megawatt,respectively. In commercial microgrids,soft costs account for 43%,while in community microgrids they account for 24%.

Why do microgrids cost so much?

Location and sizeof the microgrid also play a role,Adams says. Cost can add up for a microgrid if it's located in a place where construction isn't easy,like a dense urban environment,especially if a lot of distribution reconfiguring is necessary. Scale influences price - although not always as one might think.
