Are helical piles good for solar panels?

Helical piles and micropiles work well in compression and tension applications and are ideally suited for solar panel installation. What are the differences between drilled shaft and helical piles? What equipment options are available for their installation?

How deep is a drilled shaft pile for a solar array?

Drilled shaft piles for solar array footings can vary anywhere from 6 to 24 inches in diameter and 5 to 30 feet deep, depending on site conditions and other variables. The drilled shaft or borehole is filled with high-strength cement grout or concrete. At times, steel casing or re-bar is used for reinforcement.

What is a hardrock solar pile driver?

Hardrock solar pile driver can drive the pile into soil or rock to support the solar panel for solar power station system and guardrail installation, the common application is for Photovoltaic panels installation. There are several types of Photovoltaic rigs, from manual rig, to semi-hydraulic pile driving machine to fully hydraulic drilling rig.

Are helical piles a good choice for solar array anchoring?

Depending on ground conditions, helical piles can often be shorter in length and therefore cost less in installation time and energy consumption than comparable driven piles or drilled shafts. Some manufacturers of helical piles for solar array anchoring assert installation rates as high as 500 piles per day.
