

How to install photovoltaic panels on electric poles

Should I install my solar energy system on a pole mount?

But if you live in a remote location or otherwise have space, it may significantly reduce the installation cost by installing your solar energy system on a pole mount in an unused part of your yard. There may be other reasons you may want to consider a pole mount as an alternative to traditional flush mounts or solar racking on your roof.

How do pole-mounted solar panels work?

Pole-mounted solar often incorporates solar tracking systems, which automatically tilt the solar panels to capture the optimal amount of sunshine. Tracking systems can increase the production of your solar panels by 25% or more. If you add trackers to your ground-mounted solar array, you can choose either a single- or dual-axis system.

How many solar panels can a pole mount hold?

Solar installers and DIYers can use a solar pole mount by choosing either a top of the pole mount or side of the pole mount. Top of the pole mounts can hold up to 24 modules: A top of the pole mount is basically securing solar panels on a single pole, or several poles depending on the array size, directly on top of the pole.

Should I use a solar tracker or a pole mount?

Whether you want to use a solar tracker or not, top of the pole mounts offer you that flexibility while securing your home solar panels. Top of the pole mounts also offer the ability to manually adjust the tilt angles to increase overall efficiency.

Should you install solar panels on your roof?

Why consider pole mounts for your solar energy installation: If you live in the city and don't have much space, you are going to install home solar panels on your roof to conserve precious backyard space.
