What are photovoltaic panels & how do they work?

Photovoltaic panels, or solar panels, are the most crucial component of a solar power system. They are responsible for converting sunlight into direct current (DC) electricity through a process called the photovoltaic effect. Solar panels are made up of many individual solar cells, which are usually made from silicon, a semi-conducting material.

Can solar panels be mounted on a flat roof?

For solar panels on a flat roof, mounting systems are slightly different and can include a triangle 'ballast' box to support the panels. For solar thermal panels (with cells that use the sun's heat to warm water in a house) things are a little different.

How do you prepare a roof for a solar panel installation?

Preparing the Roof: Inspect the roof structure to ensure it can handle the weight of the PV panels and mounting equipment. Remove any debris or obstacles that may affect the installation or sunlight exposure, and clear the area around the roof where people will work.

Why should you choose Renogy solar panels & mounts?

When installing solar panels and mounts, you need the best, and Renogy is one of the most reputed manufacturers. Installing your solar power system can potentially reduce energy costs and make your home more eco-friendly.

Can solar panels be installed on a roof?

“The solar panels will need to be mounted on the roof by installers who understand roofing and will need some scaffold decks to safely get the panels to the roof.

How do solar panels attach to a roof?

The most common roof mounted structure of all. Consists of attaching a set of rails to the rooftop. Each solar panel is then attached to the rails through a set of clamps. The rails are secured to the rooftop by screws and bolts. This type of installation directly uses bolts and screws to secure each panel to the roof.
