

How to install the diagonal brace of photovoltaic bracket

What is a diagonal brace kit?

This diagonal brace kit includes the brace, sleeves, and hardware for installation between one north and south pair of support legs. IronRidge End Clamps secure PV modules to the Rails using the top slot of these rails. Our Clamps are independent of the module's mounting holes.

How do I connect a solar stack module to a pedestal?

Modules should be bonded to the Solar Stack pedestals with the manufacturer approved middle/end clamps. Grounding hardware (as a part of the module clamps) forms secure electrical bonds with both the module and the pedestal, resulting in many parallel grounding paths throughout the system.

Can a racking system be used to ground a PV module?

This racking system may be used to ground and/or mount a PV module complying with UL 1703 only when the specific module has been evaluated for grounding and/or mounting in compliance with the included instructions. The system is a non-separately derived system.

How do you put a solar stack pedestal in foam?

Solar Stack pedestal should be placed into foam within 1-2 minutes after foam is dispensed. All exposed polyurethane adhesive should be protected from UV exposure. This can be accomplished by coating with an exterior grade acrylic paint/coating or covering the foam adhesive with another method.

How do I install a solar stack?

Mark the lines across the roof for all the mounts. Prepare the Solar Stack pedestals and place them next to the marked lines where they will be installed. Surface Preparation. All roof surfaces must be free of any debris, dirt, grease, oil, and standing water before adhesive is applied. Follow adhesive manufacturers application instructions.
