

How to install the generator wind shield

Can a storm shield cover run a generator?

Enjoy a neat, finished look while running your generator with confidence - the Storm Shield cover has the ability to withstands up to 70 mph winds, up to 12 inches of rain per hour and up to 18 inches of snow per day. The durable RF-welded seams and tough, NFPA-701 flame retardant rated vinyl fabric ensure the cover remains waterproof.

How do I obtain a shield generator?

To obtain a Shield Generator, follow the canyon on your right (as indicated on the map, it's the white area) after the location of the first AT-ST. Keep low to avoid enemy fire. After winding your way along for a while, you'll reach the Shield Generator.

How do you extract a shield generator from a wall?

To extract a shield generator from a wall, first, destroy two AT-ATs. One is located with three AT-PTs and the other is nearby. After taking down both AT-ATs, head towards and destroy the shield generator.

How do you install a generator cover?

This generator cover has an innovative self-attaching design and installs easily in three simple steps with no tools necessary. Clamp it, frame it, then cover it. The high-strength clamps and fiberglass frame rods connect directly to the generator, while the adjustable omni-fit electrical panel apron protects your outlets keeping them dry and safe.
