How do I extend the battery life of my solar panels?

Solar Power panels are an investment, to protect that new investment its important to properly maintain your batteries. In order to get the most out of your batteries follow these tips to extending battery life for your solar power system. Try to limit the number of batteries in the bank.

Do solar batteries need maintenance?

Depending on the specific type of solar battery,other maintenance tasks may also be necessary. Solar batteries function by storing excess energy produced by your solar panels for later use.

Are solar batteries maintenance free?

Apart from the flooded lead-acid battery, all the other battery technologies are advertised as being "maintenance-free", because you don't have to do anything for them to work after installation. If you don't perform solar battery maintenance on a flood-lead acid battery from time to time, it'll be damaged and stop working.

How to take care of a backup battery bank?

So to take care of a backup battery bank,its best to get AGM batteries,which we discuss below,because they require practically no maintenance,and trickle charge them off a small solar panel or other electricity source. If you use a good setup,your solar batteries can last 8 years.

What is bulk phase in solar panel battery maintenance?

The bulk phase is where the battery gets recharged from 0-80% capacity. During the absorption stage,it is trickled charged for the remaining 20%. Finally,once the battery is fully charged,it enters the float phase. A good understanding of these phases is crucial in solar panel battery maintenance.

Do Fla batteries need maintenance?

FLA batteries require more hands-on maintenance. Regularly topping off with distilled water,checking for corrosion,and measuring the specific gravity should be part of your routine care for these types of batteries. Proper solar battery maintenance is a crucial part of any solar energy system.
