

How to report someone who installed photovoltaic panels

How do I choose a solar installer?

Choose a solar installer. An installer can help you determine whether your roof is suitable for solar panels. Begin by researching qualified, insured installers online or asking for recommendations from people who've gone solar. Comparison-shop by asking multiple installers to come assess your roof.

How do I determine my home's solar rooftop potential?

Determine your home's solar potential. Aside from your roof's condition, your home's solar rooftop potential depends on your geographic location, the position of your home in relation to the sun, how much shade you have, and the PV system you and your installer choose.

Do homeowners own solar panels?

However, homeowners do not own the solar panels installed on their houses. They have little control over where or how many solar panels are installed and often do not benefit from any tax incentives that the state and the federal government provide because they are not the panels' owners.

Can a roof support solar panels?

Make sure your roof can support solar panels. A solar installer, roofing expert, or structural engineer can help you determine your roof's solar suitability.

Do solar panels need a building inspector?

When looking at the solar panels, a building inspector must verify that they are properly installed in accordance with the manufacturer's specifications based on the local AHJ requirements, environmental factors, and aspects of the type of structure.

Should you go solar if your home is not suitable for solar?

If your home is not suitable for rooftop solar, you can still get the benefits of clean energy by investing in a community or shared solar program. By going solar, you can play an active role in achieving the nation's goal of a carbon-free electricity sector by 2035. For more information, visit the Homeowner's Guide to Going Solar.
