

How to set up a home microgrid

Should you use a microgrid to power your home?

Areas prone to power outages, whether through hurricanes or frequent storms, benefit from microgrids. Homeowners are encouraged to be safe and stay inside, versus leaving their home to find locations with power. Homes can be exclusively powered by microgrids as well, without any dependence on power companies.

Should a single-family home have a microgrid?

"A microgrid for a single-family home typically includes solar panels, backup battery storage, inverters, and possibly a generator for additional resilience," explained Troy Dunnington, a smart energy and lighting design consultant in San Diego.

What is a solar microgrid?

A solar microgrid allows you to generate your own clean power-- both during an emergency and on a day to day basis. It's a green, silent, and surprisingly economical way to provide backup power for your family during the next power shutoff -- or during an unplanned outage following an earthquake. How can you build your own microgrid?

How do I get a solar microgrid?

Some microgrids are connected to the main grid under normal circumstances, while others are totally separate. If you want a solar microgrid, the fastest and easiest option is to buy one from a company that provides them professionally. Tesla Solar is one example.

What is a microgrid & how does it work?

What Are Microgrids? A microgrid is a local energy grid. It's located on your property and is connected to your traditional power grid, which delivers the energy for powering your home. Power outages, however, disrupt that delivery. Microgrids, in response, automatically disconnect from the traditional grid and begin powering your home.

Should I buy a DIY microgrid?

If you have more modest power needs, you rent your home/apartment, or you don't want the cost of a professional microgrid, a DIY option may be the best bet. Most DIY microgrids are totally separate from the main grid -- they don't use net metering, and in many cases are not even attached to your home.

Set up battery-powered LED lights and phone/laptop chargers to use during outages. Maintain a supply of propane, gasoline, or diesel to run backup generators when needed. Consider adding more solar panels or wind ...
