Fluctuating solar and wind power require lots of energy storage, and lithium-ion batteries seem like the obvious choice--but they are far too expensive to play a major role.

A complete discussion of wind power would extend beyond the 800 words that I have for this column. However, an overview of the "basics" does fit and enables intelligent conversation on the topic.

In essence, coupling battery storage with wind turbines is key to a reliable and effective residential energy system. By understanding the various battery types and assessing your storage requirements, you can create a seamless energy ...

A company called SolarReserve may have found a solution: It built a large solar plant in the Nevada desert that can store heat from the sun and generate electricity for up to 10 hours even after...

In this event, teams construct a blade assembly device prior to the tournament that is designed to capture wind power and complete a written test on the principles of alternative energy. The information below should not be ...

The intermittent nature of wind power necessitates the capture and storage of excess energy for periods of low wind or increased demand. Battery technologies play a crucial role in efficiently storing wind energy and ...

The core function of energy storage systems for wind turbines is to capture and store the excess electricity. These systems typically incorporate advanced battery technologies, such as lithium-ion batteries, to efficiently store the energy for ...

When you're looking into wind power for your home, it's key to differentiate between the two main kinds of wind turbines: Horizontal-Axis Wind Turbines (HAWTs) and Vertical-Axis Wind Turbines (VAWTs). They're different in how ...

"That makes them equally good at providing power for a small village or a large power plant," says Alejandro Datas, an electrical engineer at the Polytechnic University of ...

A big challenge for utilities is finding new ways to store surplus wind energy and deliver it on demand. It takes lots of energy to build wind turbines and batteries for the electric grid. But Stanford scientists have found ...
