

How to support solar power generation

How do I get solar power?

Here are the steps to take to get powered by sunshine. Choose a solar installer. An installer can help you determine whether your roof is suitable for solar panels. Begin by researching qualified, insured installers online or asking for recommendations from people who've gone solar.

How is solar energy used?

Solar power is used in two main ways: generating electricity (like with rooftop solar panels) or generating thermal energy (like with concentrated solar power plants). For most homeowners, solar panels that convert solar energy to electricity are the best use of solar energy because it allows them to save on electric bills.

How do you use energy from the Sun?

The two main ways to use energy from the sun are photovoltaics and solar thermal capture. Solar photovoltaic systems are common for smaller-scale electricity projects (like home solar panel installations), while solar thermal capture is typically only used for electricity production on massive scales in utility solar installations.

Why is solar energy important?

Solar energy can help to reduce the cost of electricity, contribute to a resilient electrical grid, create jobs and spur economic growth, generate back-up power for nighttime and outages when paired with storage, and operate at similar efficiency on both small and large scales. Solar energy systems come in all shapes and sizes.

How do businesses use solar technology?

Businesses and industry use solar technologies to diversify their energy sources, improve efficiency, and save money. Energy developers and utilities use solar photovoltaic and concentrating solar power technologies to produce electricity on a massive scale to power cities and small towns. Learn more about the following solar technologies:

Should I add a solar energy system to my roof?

You may be considering the option of adding a solar energy system to your home's roof or finding another way to harness the sun's energy. While there's no one-size-fits-all solar solution, here are some resources that can help you figure out what's best for you. Consider these questions before you go solar. See the Spanish version [here](#).

Concentrated solar power (also known as concentrating solar power or concentrating solar-thermal power) works in a similar way conceptually. CSP technology produces electricity by concentrating and harnessing solar ...
